# Combining Local and Global Descriptors Through Rotation Invariant Texture Analysis for Ulos Classification

Teamsar Panggabean and Arlinta Barus

School of Informatics, Del Institute of Technology, Indonesia

- Benefiting local & global descriptor for classification task using CNN.
- Generating local rotation invariant features using Local Binary Pattern - ROR.
- Extracting global rotation invariant texture features using Radon Transform and Discrete Wavelet Transform.

Local & Global Invariant features as a result of LBP and Radon Transform + DWT
